

## Final Peer Review - by Isabel

Lily: Did a great job with the pantry and making sure everything was working really well ahead of the deadline. Was great and took initiative with finding bugs, broke my feature (the whole hook flow) multiple times and so now I'm pretty certain it's very robust. Added really cool features to the pantry very successfully, such as the autocomplete and adding ingredient amounts to each pantry ingredient.

Maryann: Completed all her work with search early, and even though she was gone over this past weekend, she was responsive on communication and was still able to help with last minute bug fixes and deploying the app to heroku. Went above and beyond with the search by adding a new feature - the load more search button - and actually going through and trying to optimize search more.

Nadia: Usually had to leave group work time early to sleep for crew, but ended up working a lot more outside of those group work time and so was able to complete the same amount of work as the rest of the team. Took a lot of initiative in making the ratings look awesome (the stars took a lot of work!). Didn't have a ton of UI experience going in, but really pulled through and worked hard to make things look right.
