Progress
Nadia: Cookbook
Lily: Figured out the issue for multiple words in pantry ingredients
Isabel: Updated the UI, began to think about how to implement the hook, writing prelim specs
Maryann: Worked on scaling with serving sizes

Questions
- Problems with fraction symbols (ASCII)
- Ingredients search autocomplete
- search ranking

Goals for the Week
Nadia: Finish up Cookbook and implement a Rating system
Lily: Parse ingredients into ingredient database, use new ingredient object in Pantry, add ingredients to Pantry with autocomplete
Isabel: Finish the preliminary hook for the demo on Thursday (without creating a new user from user-less pantry). Finish the entire hook by Saturday.
Maryann: Finish flexible search

Minutes
- Ingredients search: explained how recipes only come up with complete list of ingredients
    - Harihar recommended 'fuzzy' ingredients, maybe like 'crushed tomatoes = tomatoes'
- Problems with fraction symbols in ASCII: : suggestion, display symbol 'x 2' literally in the ingredients line. Identify certain ASCII fraction values
- Rank based on number of matched ingredients and ranking so we will always display some recipes
- Fix the UI of the recipe results so it is more clear how to get to the recipe view

    To Do:

    Lily
    - Ingredients matching (fuzzy matching, string comparison library in Javascript that has ratings for matchings)
    - Ingredients autocomplete
    - routing for Recipe view
    Isabel
    - Hook page
    - Pantry/search page from hook, where user creation is possible
    - Fix UI for recipe view
    Nadia
    - Cookbook
    - Ratings (on recipe view, aggregated ratings as well)

Maryann
- Rank search results by ratings + number of ingredients matching
- Flexible search
